

Effluent Filter (Brush Style)

RBT-STF-110-4

EQUIPMENT

OVERVIEW

(3-filter manifold system pictured, 2-6 filter systems available)

Easy in . . .
Easy out . . .
NO locking parts . . .
NO moving parts . . .
NO clogging . . .
NO cleaning . . .
NO hassle . . .

with better filtration.

Truly . . .
the most versatile
and effective filter on
the market . . .

and it's disposable!

Our standard STF-110 disposable, passive septic tank filter can be manifolded in multiples of up to 6 for over 6000 GPD. These systems are designed for advanced residential and commercial septic system applications.

These light weight manifold assemblies are easily added to standard septic tank exit pipes in place of the standard "T". Allowing for easy access to all filters through a standard 24" diameter riser opening.

Each new filter is shipped in a 4-mil plastic bag for easy disposal of the old filter after replacement.

A sleeve is available for servicing high level tanks. The STF-130, tool prevents particulate from leaving the tank during servicing.

A long reach grabber is also available. The STF-120 is used for deep tanks. It grabs and holds the filter for easy removal and installation, making replacement of the filters clean and hassle free.

Easy in, easy out, a bag for disposal, it can't get any easier !
